DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-20, 22-24, 26-28, 32-39 and 41-42 are rejected under 35 U.S.C. 102(e) as being anticipated by Akahane (US 6539172).

Akahane discloses a cartridge, which is capable of being detachably attached to a fluid heating device including a heater for heating a fluid to be transfused, comprising: a zigzag-shaped fluid path, through which the fluid passes; and a contact section being capable of contacting the heater, said contact section being made flat and constructed of a material that is heat conducting and transparent, wherein a sectional shape of said zigzag-shaped fluid path, which is perpendicular to a flowing direction of the fluid, is formed into a polygonal shape with sides that are substantially equilateral.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3742

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akahane.

Akahane a cartridge, which is capable of being detachably attached to a fluid heating device including a heater for heating a fluid to be transfused, comprising: a zigzag-shaped fluid path, through which the fluid passes; and a contact section being capable of contacting the heater, said contact section being made flat and constructed of a material that is heat conducting and transparent, wherein a sectional shape of said zigzag-shaped fluid path, which is perpendicular to a flowing direction of the fluid, is formed into a polygonal shape with sides that are substantially equilateral.

Akahane does not explicitly disclose a single membrane covering both sides of said rigid passageway. It would have been obvious to one having ordinary skill in the art at the time the invention was made to, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. *Howard v. Detroit Stove Works*, 150 U.S. 164 (1893).

Allowable Subject Matter

Claims 25 and 40 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's arguments with respect to claims 1-31 have been considered but are moot in view of the new ground(s) of rejection.
